Kidney - Healthcare

How Kidneys Work

- Inside each nephron, a special blood vessel called a glomerulus works like a strainer to keep blood cells and needed substances in while letting extra fluid and wastes out.
- Each Kidney contains about one million nephrons - tiny filtering centers that clean the blood.
- Blood enters the kidney here, through the renal artery.
- Drop by drop, urine is produced and travels to the bladder through this tube, called a ureter.

Interesting Facts About Human Brain

It is a myth that humans only use 10 percent of our brain. We actually use all of it. We're even using more than 10 percent when we sleep.

The brain is capable of surviving for 5 to 6 minutes only if it doesn't get oxygen after which it dies.

While awake, your brain generates between 10 and 23 watts of power—or enough energy to power a light bulb.

Headaches are caused by a chemical reaction in your brain combined with the muscles and nerves of your neck and head.
